11

12 Introduction

13 The EU Data Protection Directive (95/46/EC) sets the legal framework for attribute release within the European
14 Union and European Economic Area. For more information on the requirements imposed, see Introduction to Data
15 protection directive [DirectiveIntroduction].

16 The Data Protection Code of Conduct sets out practices for meeting the requirements of the Data Protection
17 Directive. It defines a set of rules to be followed by Service Providers wishing to receive user attributes from the
18 Identity Providers managed by Home Organisations. It is expected that Home Organisations will be more willing to
19 release attributes to Service Providers asserting the conformance to the Data Protection Code of Conduct. For more
20 information, see Introduction to Code of Conduct [CoCIntroduction].

21 This document defines a SAML 2.0 Entity Category attribute [SAML2EntityAttr] for Service Providers that claim
22 conformance to the Data Protection Code of Conduct.

23 Syntax

24 The following URI is used as the Attribute Value for the Entity Category attribute:

25 `http://www.geant.net/uri/dataprotection-code-of-conduct/v1`

26 Semantics

27 By asserting membership in the Entity Category, a Service Provider claims

- 28 • that it is bound by
 - 29 ○ the data protection laws in the European Union or European Economic Area, or
 - 30 ○ a third country's domestic data protection laws which have been recognised by the EC as ensuring
31 an adequate level of protection [ECWhiteList], or
 - 32 ○ an international commitment into which a third country has entered and which has been recognised
33 by the EC as ensuring an adequate level of protection [ECWhiteList], such as the US Safe harbour
34 [USSafeHarbour]
- 35 • that it has committed to the Data Protection Code of Conduct for Service Providers [CoCforSP], and
- 36 • that it conforms to the SAML 2 Profile for the Data Protection Code of Conduct [CoCSAML2]

37 Provenance

38 When an Entity's registrar (normally the Entity's home federation) registers the Entity's assertion of membership in
39 the Entity Category it must perform at least the checks defined for a home federation operator in the Operator
40 guidelines document [CoCOperatorGuidelines].

41 Examples

```
42 <EntityAttributes xmlns="urn:oasis:names:tc:SAML:metadata:attribute">  
43   <Attribute xmlns="urn:oasis:names:tc:SAML:2.0:assertion"  
44     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"  
45     Name="http://macedir.org/entity-category">  
46     <AttributeValue>http://www.geant.net/uri/dataprotection-code-of-conduct/v1</AttributeValue>  
47   </Attribute>  
48 </EntityAttributes>
```

49 Usage

50 Enable Home Organisations / Identity Provider administrators to easily set up a global attribute filter policy for
51 Service Providers committed to the Code of Conduct.
