About SCHAC

The SCHema for ACademia, SCHAC <https://wiki.refeds.org/display/STAN/SCHAC>, aims to define and promote common schemas in the field of higher education to facilitate inter-institutional data exchange. This schema is originally the result of the work in the area of attributes coordination carried out within the now discontinued TERENA Task Force on Middleware, TF-EMC2, and is now being maintained under the auspices of REFEDS <https://refeds.org> and the SCHAC Editorial Board.

SCHAC work started in 2005; the first release of "SCHAC Individual Attributes Specification" was issued in May 2006.

Current as well as older SCHAC specifications can be found on SCHAC web page <https://wiki.refeds.org/display/STAN/SCHAC>, under the section called "SCHAC Releases" <https://wiki.refeds.org/display/STAN/SCHAC+Releases>. The URN and OID registries are available here: https://wiki.refeds.org/display/STAN/SCHAC+Registry+Information. Please note that the normative version of the schema is the Current Release PDF document under “SCHAC Releases.”

For more information about SCHAC, please refer to the SCHAC web page <https://wiki.refeds.org/display/STAN/SCHAC>.

Related Work

In its current version, the SCHAC schemas are not oriented to any particular technology. They define a set of attributes to describe individuals in the academic and research institutions. An appropriate LDAP profile is included as an appendix of this document. An XML profile will be defined in Appendix B at the end of this document.

These definitions assume that other attributes describing individuals are already available and properly encoded, according to the following standards:

The eduPerson schema v. 201310, as defined at https://macedir.org/specs/eduperson/
The person schema, as defined by X.521 (2001) - [RFC 4517, RFC 4519]
The organizationalPerson schema, as defined by X.521 (2001) - [RFC 4517, RFC 4519]
The inetOrgPerson schema, as defined by RFC 2798

Please note that where newer versions of the references exist, only the versions referred to in the current SCHAC specifications normatively apply.
Attribute Information

For all attributes, the following metadata is defined:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>A label used to identify and distinguish one attribute from another</td>
</tr>
<tr>
<td>Description</td>
<td>A short description of the attribute</td>
</tr>
<tr>
<td>OID</td>
<td>Registered OID of the attribute</td>
</tr>
<tr>
<td>Format</td>
<td>The syntax for the representation of the attribute's values</td>
</tr>
<tr>
<td>Number of values</td>
<td>Single Only one value is permitted for describing a given individual</td>
</tr>
<tr>
<td></td>
<td>Multi An indefinite number of values can be used</td>
</tr>
<tr>
<td>References</td>
<td>Additional information used to clarify some properties of attributes like</td>
</tr>
<tr>
<td></td>
<td>format, description or number of values</td>
</tr>
<tr>
<td>Examples</td>
<td>Example of values used within the attribute</td>
</tr>
</tbody>
</table>

Attribute Classification

The attributes considered in this document are designed to contain information specifically about people. It is helpful to consider this information within broad categories. The ten categories used in this document have been collected from the NMI LocalDomainPerson survey <http://www.nmi-edit.org/CAMP/EDIT_IdM/docs/internet2-mace-dir-localdomainperson-200505.html> and discussions with the International Schema Archives (Feb, 2004; no longer available online). The categories are:

- Personal Characteristics
- Contact / Location Information
- Student Information
- Employee Information
- Linkage Identifiers / Foreign Keys
- Entry Metadata / Administration Information
- Confidentiality / Attribute Release (Visibility)
- Authorization, Entitlements
- Group-related Attributes
Attributes defined by SCHAC

Personal Characteristics

Personal characteristics describe the individual person represented by the entry.

**schacMotherTongue**

<table>
<thead>
<tr>
<th>Name</th>
<th>schacMotherTongue</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>Is the language a person learns first. Correspondingly, the person is called a native speaker of the language. Usually a child learns the basics of their first language from their family.</td>
</tr>
<tr>
<td>OID</td>
<td>1.3.6.1.4.1.25178.1.2.1</td>
</tr>
<tr>
<td>Format</td>
<td>See RFC 3066 Tags for the Identification of Languages</td>
</tr>
<tr>
<td>Number of values</td>
<td>Single</td>
</tr>
</tbody>
</table>

**Format**

```
urn:schac:personalPosition:<country-code>:<domain>:<iNSS>
```

The `<country-code>` must be a valid two-letter ISO 3166-2 country code identifier or the string "int", and assigned by the SCHAC URN Registry for this attribute at [https://wiki.refeds.org/display/STAN/SCHAC+Registry](https://wiki.refeds.org/display/STAN/SCHAC+Registry).

`<domain>` is the institution domain name according to RFC 1035.

`<iNSS>` is a Namespace Specific String as defined in RFC 2141 but case insensitive. Valid components for it are those specified (or explicitly delegated) by the SCHAC URN Registry for this attribute at [https://wiki.refeds.org/display/STAN/SCHAC+Registry](https://wiki.refeds.org/display/STAN/SCHAC+Registry).

**Number of values**

Multi

**RFC 4517 definition**

```plaintext
(schacAttributeType:13
  NAME 'schacPersonalPosition'

  Section: 5.13 title
  This attribute contains the title, such as "Vice President", of a person in their organizational context. The "personalTitle" attribute would be used for a person's title independent of their job function.

**Examples**

National extensions:

Linkage Identifiers / Foreign Keys

Linkage attributes are those identifiers used to link a directory entry with records in external data stores or other directory entries. The use of linkage identifiers can obviate the need to synchronize data elements between systems of record and the enterprise directory. Linkage attributes are also used in the implementation of metadirectory services.

Entry Metadata / Administration Information

Entry metadata attributes are used to contain information about the entry itself, often its status, birth, and death. Such attributes can be critical to metadirectory processing. While the object classes discussed here were designed to accommodate person entries, metadata attributes can also be useful with non-person entry types such as groups. In such cases the metadata attributes may be best defined in an auxiliary object class independent of the person object class.

**schacExpiryDate**

<table>
<thead>
<tr>
<th>Name</th>
<th>schacExpiryDate</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
Confidentiality / Attribute Release (Visibility)

Confidentiality attributes are commonly used to indicate whether an entry is visible publicly, visible only to affiliates of the institution, or not visible at all. In some cases only specific attributes, such as phone, address, and email address, are restricted, in other cases all attributes are restricted.

**schacUserPrivateAttribute**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
<th>OID</th>
<th>Format</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>
**Authorization, Entitlements**

Authorization for services is generally implemented in LDAP directories either through the use of entry attributes or group memberships. (For information regarding LDAP groups please see the MACE Best Practices for Directory Groups document at [https://web.archive.org/web/20111204210114/http://middleware.internet2.edu/dir/groups/>). Applications such as Shibboleth (see [https://shibboleth.net](https://shibboleth.net)) can make use of entitlement attributes in an entry to provide authorization information to requesting services.

**schacUserStatus**

<table>
<thead>
<tr>
<th>Name</th>
<th>schacUserStatus</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>Used to store a set of status of a person as user of services</td>
</tr>
<tr>

```plaintext
( schacAttributeType:19
  NAME 'schacUserStatus'
  DESC 'Used to store a set of status of a person as user of services'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

**Examples**

To store different user activity states at University of Málaga (uma.es):

A parameter in the URN can be used to represent the temporal validity of the statement:

- urn:schac:userStatus:si:ujl.si:webmail:active+ttl=20060531235959
Group-related Attributes

Directory groups are often used to provide authorization to entries and attributes, as well as to restrict or provide access to services. There are benefits to having group memberships described in members’ entries as well as in a group entry. Because not all directory servers provide this functionality (Microsoft Active Directory and Novell eDirectory do) local attributes are often defined to meet organizational needs.

**schacProjectMembership**

<table>
<thead>
<tr>

}
Appendix B: SAML 2.x Profile

The rules defined by the SAML 2.0 X.500/LDAP attribute profile [SAML-X500] are to be applied, with the exception that the XML attribute named Encoding defined by that profile is NOT specified for use with this profile.

Appendix C: List of Changes

May 29, 2018. V:1.5.1.b
- Added schacUsageCode
- Updated all links from http to https where such a change successfully resolves
- Removed mention of "MACE Best Practices for Directory Groups" as that document is no longer available.

April 11, 2018. V:1.5.1.a
- Clarified normative version of the schema and registry are the PDF.
- Updated pointers from ISO 1366 to ISO 1366-2
- Updated format description for homeOrganizationType
- Updated pointers from TERENA URN Registry to SCHAC URN Registry

March 31, 2015. V:1.5.0 final
- Added SAML 2.x profile (appendix B)
- Removed SAML2.0 names from tables
- Removed 'Security Attributes and Keys' (not applicable to today’s security needs)

March 10, 2015. V:1.5.0 final-proposed
- added additional information to schacHomeOrganization

December 29, 2014. V:1.5.0.c
- All pointers to www.terena.org, including static registry, have been updated to point to the new wiki.refeds.org space
- Minor wording cleanup
- Removal of pointers to documents no longer online
- Clarified what RFCs are normative when a newer RFC is available than what is listed
- Added SAML 2.0 name to each table
- Adjusted overall page layout
- Fixed example in schacPersonalUniqueId
- Added clear URLs in introduction to aid with accessibility

September 24, 2012. V:1.5.0.b1
- Changed SCHAC URN prefix from urn:mace:terena.org:schac to urn:shac following RFC 6338
- Added sHO as a second name for schacHomeOrganization
- Added sPUC as a second name for schacPersonalUniqueCode
- Added sPUID as a second name for schacPersonalUniqueID
- Added sUPA as a second name for schacUserPrivateAttribute

June 2, 2011. V:1.4.1.b2
- Changed the example of attribute schacPersonalUniqueID from "NIF" to "DNI".

September 16, 2010. V:1.4.1.b1
- Changed “Number of values” from single-valued to multivalued in schacHomeOrganizationType.

March 26, 2009. V:1.4.0
- Added a footnote related to "SCHAC URN Registry" and URN NID urn:schac

March 18, 2009. V:1.4.0.b4
- Links no longer underlined.
- schacYearOfBirth placed near schacDateOfBirth.
- Corrected a copy/paste error in schacYearOfBirth

March 16, 2009. V:1.4.0.b3
- Added section "About SCHAC".
- Suppression of the first paragraph in section "Normative References".
- Changed section name from "Introduction" to "Normative References".

March 13, 2009. V:1.4.0.b2
- Added schacYearOfBirth experimental attribute.
- Changed references to RFC 2252 by RFC 4517.
- Changed erroneous reference from RFC 2131 to RFC 2141 in schacProjectSpecificRole.
- Added name, location, editor and contact information.
March 4, 2009. V:1.4.0 b1
- Added schacGroupMembership objectclass.
- Changed schacProjectMembership and schacProjectSpecificRole from experimental OID branch to official branch below schacGroupMembership object class.
- OIDs schacExpAttr:1 and schacExpAttr:2 are obsoleted and will not be reused ever.

September 30, 2007. V:1.3.1 b1
- Added an experimental OID branch 1.3.6.1.4.1.25178.0.
- Defined an experimental schacExpObjClass objectclass.
- Added schacProjectMembership and schacProjectSpecificRole experimental attributes.
- Changed schacHomeOrganizationType values below namespaces "eu" and "int".

December 12, 2006. V:1.3.0
- Changed references from terena.nl to terena.org.

November 25, 2006. V:1.3.0 b3
- Changed schacPersonalPosition and schacUserStatus format and samples.

October 17, 2006. V:1.3.0 b2
- Deleted schacUUID attribute.

September 28, 2006. V:1.3.0 b1
- Changed schacHomeOrganization syntax OID.
- New definition of schacUUID attribute.
- Changed "?" by "+" in schacUserStatus sample.

May 4, 2006. V: 1.2.0
- Changed schacUserPresenceID syntax from URN to URI.
- Added references to the SCHAC URN registry.
- Clarify schaExpiryDate scope.

March 27, 2006. V: 1.1.2
- Changed from urn:SCHACPREFIX string to urn:schac:
- URN reserved for SCHAC: urn:mace:terena.org:schac:

March 10, 2006. V: 1.1.1
- Added TERENA OID.
- Branch reserved for SCHAC: 1.3.6.1.4.1.25178.1

February 10, 2006. V: 1.1.0
- Added appendix with LDAP schema.

November 22, 2005. V: 1.0.0
- Added attribute's classification according to HEP categories.

September 5, 2005. V: 1.0.0 RC3

June 24, 2005. V: 1.0.0 RC2

June 1, 2005. V: 1.0.0 RC1

May 24, 2005. V: 0.2

April 25, 2005. V: 0.1
