

April 12 2018

Attending: Tom B, Joe S, Hannah S, Shannon R, Francisco M, Brett B, Alan B, Brook S, Pål A, Romain W

Proposed agenda

1. Agenda bash
2. Open discussion of needs that WG members think the WG should address
 - a. Mapping of Sirtfi tag and security contact info for OIDC
3. Review/adjust current [work plan](#)
4. Seek consensus on the [registry](#) we've been discussing
 - a. Hannah update from AARC meeting. (from NeilsvD = A Community Tagging Pilot will be implemented soon in AARC to allow communities to identify entities that conform with a specific framework, use cases include RAF, R&S and Sirtfi. Specifically being developed for the LifeScience community to be able to identify extra IdPs who are R&S compliant in order to use RAuth.)
5. Next call

Item 2.

- Need a procedure for all orgs to follow for fed incident response. Tabletop testing. Should Sirtfi do that? AARC, eduGain? Build on AARC doc from a year ago. Bridge between fed ops and CISOs. Orgs are increasingly outsourcing their security operations, making it harder still to bridge. Eg TF-CSIRT doesn't have fed in their scope, no venue at which to engage them.

[AI] Tom speak with Nicole about the getting AARC doc baked and adopted by REFEDS

Incident Response Simulation slides, Mar. 2018:

<https://hshort.web.cern.ch/presentations/20180411%20IR%20Test%20Results.pptx.pdf>

Incident Response Simulation report, Feb. 2018:

<https://aarc-project.eu/wp-content/uploads/2018/04/20180326-Incident-Simulation-Report.pdf>

Proposed procedure, Dec. 2016:

<https://aarc-project.eu/wp-content/uploads/2017/02/DNA3.2-Security-Incident-Response-Procedure-v1.0.pdf>

- Maintenance of security contacts (and others as needed...). Testing of currency. This is within a current Geant task.

[AI] Pål check with Mario about Sirtfi WG may help somehow

- Sirtfi in OIDC. Need a schematic solution, or can a separate repository suffice? Would the registry we are discussing do the trick? Make Sirtfi federation technology agnostic.

- Registry and Sirtfi v2 IdP proactive notification (triggering a response, not necessarily processing it).

Item 4.

- Aggregation is a key role for the registry

[A] Tom invite Niels to upcoming meeting to discuss his community tagging system, metadata decoration.
