

Sirtfi Call
August 9th 2016 16:00 CEST

Planned Attendees: Nicole, Heather, Leif, Nick, Paul

Agenda:

- Discuss whether the Assurance Certification Profile element can and should be used for SPs in the case of Sirtfi
- Decide on a course of action. Possible options:
 - Clarify in the Sirtfi spec that an Assurance Profile is to be used for all entities
 - Use an entity category element for SPs
 - Use an entity category for all entities
 - Something else
- Clarify whether we need to run this through REFEDS consultation (also because we have registered Sirtfi with IANA as refeds.org)

Notes:

- General feeling that Assurance Certification Profile makes more sense, but entity-category is reasonable backup option
- Would prefer all entities (IdPs, SPs, AAs, future things...) to tag in the same way since this is a framework with equal responsibility on all parties
- OASIS spec does seem to prohibit SP usage but we think this is not intentional and shouldn't be tricky to change
- Thomas (chair of OASIS), Scot, Nate will be able to advise on errata for OASIS spec
- SP tagging plan
 - Try and influence the OASIS spec to remove the specificity on IdPs via Errata - ACTION Nick to draft errata wording (by EOW)
 - Recommend to only tag IdPs until we have figured out the next step, though they can continue to add security contacts - ACTION Hannah to change the Wiki, inform REFEDS
- AOB
 - ACTION - Nicole will add a page to the refeds site for <http://refeds.org/metadata/contactType/security> to resolve
 - ACTION - Nicole to ask REFEDS whether consultation on the namespace for assurance certification <https://refeds.org/metadata> required
