## List of people / communities we'd like to reach for their input

REFEDS Federation 2 working group

### Communities/Organizations

Type/Name	Examples	URL (if relevant)
Publishers	NISO - Judith Bush planning	<a href="https://www.niso.org/events/2019/02/wrestling-access-and-authentication-control">https://www.niso.org/events/2019/02/wrestling-access-and-authentication-control</a>

**Commented [3]:** After the big brainstorm, we might want to prioritize the lists to ensure we know which people/communities whose input is more critical.

**Commented [4]:** Seems like we should start with the types of communities and then get more specific below (mailing lists, meetings/conferences, etc.) - Added this table.

**Commented [5]:** Hi Mark - Robin Wilton here, from the Internet Society; I'd be happy to be added to the "People" list (wilton at isoc dot org)

**Commented [6]:** Are all the FIM4R "ecosystem constituent" types covered below? FIM4R describes constituents as Identity Providers, Federations and eduGAIN, Research community proxies, Research service providers, software developers, and standards bodies.

**Commented [7]:** Where do Funders or funding organization fit?

**Commented [8]:** Where do Registrars and AACRAO fit in, or others who might have a stake in sharing scholarly attributes?

**Commented [9]:** Is there an association of privacy professionals in higher education? Maybe related to the International Association of Privacy Professionals (IAPP).

**Commented [12]:** Is EDUCAUSE one of these? Are there other associations like EDUCAUSE around the world?

**Commented [13]:** It looks like EDUCAUSE is listed under Libraries.

**Commented [14]:** Not sure how it got there. I moved it here.

**Commented [15]:** I don't see any VOs like LIGO. Also, wondering if any of the projects that have started taking up federated identity in areas like Astronomy should be polled. E.g. Large Synoptic Survey, I think the Square Kilometer Array. And perhaps a project that has not yet set down that path... e.g. Thirty Meter Telescope (also a good way to rope them in).

**Commented [16]:** BTW, as part of some independent work, I have been compiling lists of professional associations with their media contacts for their newsletters. I can share with that group if useful (i.e., something like a press release)

National Academies of Science, Medicine, and Engineering	most countries/regions have them	<a href="http://www.nasonline.org/">http://www.nasonline.org/</a>
Big industry verticals that could benefit from federation	<p>Reps from Healthcare, Insurance, Airlines? I have spoken with people who provide services to airline companies and are looking for a way to trust organizational identities. But, I don't have a lot of direct contacts.</p> <p>My experience suggests they have unique needs when it comes to common federation practices like discovery (for example, they don't want one org to see the other orgs that can log in). But much of what they need in terms of establishing trust and having a mechanism to authenticate users with home credentials seems very similar.</p>

I would like to contact your Standing Committee on Web Infrastructure (ISC) for any reports or analyses of web infrastructure that includes access and authentication controls.

I am a co-chair of the REFEDS Federation 2.0 working group: <https://wiki.refeds.org/display/GROUPS/Federation+2.0> Identity Federations are the infrastructure between many university IdP or authentication systems and the resources used for research and education. We are working on a strategic plan to share among the many national identity federations and would like input from as many research communities on their needs and visions for networked communication and access.

Your committee's investigation of a common infrastructure to be shared across many academic organizations could inform what the national identity federations could do better to enable more seamless research access.

Thanks for your attention and assistance.
