Notes

- new SFA profile format: [https://docs.google.com/document/d/1ZjpzyYWZhqjBTeLxzX9Vug9Whqb9YEK29e1FBjL5VM/edit#](https://docs.google.com/document/d/1ZjpzyYWZhqjBTeLxzX9Vug9Whqb9YEK29e1FBjL5VM/edit#)

  - participants liked the new format better
  - SFA is better than base which has already a meaning in InCommon
  - discussion if “more secure” SFA will be needed later – no clear consensus
  - section 4 first table
    - asterisk not explained in table header
      - memorized secrets. 62-71 -> 10 characters. Add example characterset pool (a-z and A-Z etc). Refrain from imposing character complexity requirements
    - lifetime of the secrets in row 2 is not made explicit. Does an item in row 2 assume the secret is locked after a single wrong entry?
    - does row 2 really exist as a single authentication factor?
    - 2048 bit length for asymmetric keys
    - check the length of ECC key
  - section 4, replacement of lost factor
    - replacement or recovery? Replacement works better.
    - there must be a way to get a new password

- next call on Wednesday 4th April at 1500 CEST
