eduPerson

eduPerson

eduPerson is a Lightweight Directory Access Protocol (LDAP) schema designed to include widely-used person and organizational attributes in higher education. The eduPerson object class provides a common list of attributes and definitions, drawing on the existing standards in higher education. Related object classes include:

- eduOrg
- eduMember (The work of eduMember has concluded its activities for the present, and all work has migrated to the Grouper project)
- eduCourse (The eduCourseCourseID group has completed its work and is dormant at present. You may still find archival information and support in the wiki for MACE-Dir)

Development of eduPerson was originally created and supported with funding from Internet2, and was formally transitioned to REFEDS for management on 15 October 2018.

eduPerson Release History

- eduPerson (202001)
- eduPerson (201602) (supports ORCID identifiers)
- eduPerson (201310)
- eduPerson (201203)
