Consultation - Federation 2.0 Report

This consultation will be open from Tuesday 5th October 2021 at 17:00 CEST to Monday 1st November at 17:00 CEST

Background

R&E federations are key enablers of academic endeavors by facilitating user access to protected online resources, within and across organisations, locally and around the world. They have evolved from seeds planted by select universities to encompass the full range of educational institutions, research institutions, their commercial and governmental partners, and research and scholarly collaborations. The distinctive access needs of the Academy to support trusted collaboration have resulted in a unique combination of technical and policy implementations. We name this singular, global infrastructure, an integration of all of the national R&E federations, Academic Interfederation.

The Federation 2.0 Working Group, following a scenario planning methodology, explored the future of 10 or more years hence. We were concerned about what we saw: variations of dystopia across the Academy. We realised that the community of national Research & Education (R&E) federations is not prepared to navigate the critical uncertainties that will determine their future.

This report sets out a range of recommendations on actions that need to be taken to ensure the future of Academic Interfederation.

Overview

Participants are invited to:

- consider the proposed report
- propose appropriate changes / challenges to the proposed text, and
- reflect on whether the recommendations in the report are valid and correct.

This consultation will be open from Tuesday 5th October 2021 at 17:00 CEST to Monday 1st November at 17:00 CEST

The document for the consultation is available as a pdf attachment. All comments should be made on: consultations@lists.refeds.org or added to the changelog below. Comments posted to other lists will not be included in the consultation review.

<td>1</td>
<td>general</td>
<td>I think it is strange that a report on Academic Interfederation does not mentioned edugain at all. This seems a significant oversight.</td>
<td>Nicole Harris, GEANT</td>
<td>We added a section describing the current landscape, including edugain.</td>
</tr>
<tr>
<td>2</td>
<td>616</td>
<td>The report makes a recommendation that new governance structure for federation be put in place but does not analyse or discuss why the group feels the current models are ineffective. To make this point, I feel this analysis is needed. There are many groups looking at federation - REFEDS, edugain, FIMARI, FITIMAL, AEGIS etc. The report does not mention them.</td>
<td>Nicole Harris, GEANT</td>
<td>We mentioned many of these in the new description of the the current landscape. We hope the sections &quot;Illustrating the Challenge&quot; and &quot;What's Missing&quot; demonstrate the need for a new governance structure that is not met by the listed parties.</td>
</tr>
<tr>
<td>3</td>
<td>627</td>
<td>&quot;Academic Interfederation exists, but is not coordinated nor resourced as a viable and evolving infrastructure&quot; - this statement implies that the edugain infrastructure is neither resourced nor viable. This needs addressing.</td>
<td>Nicole Harris, GEANT</td>
<td>Academic Interfederation is not the same as edugain and there are interfederations other than edugain. We hope we have made clear that edugain serves the community well, but does not have the scope of governance proposed.</td>
</tr>
<tr>
<td>4</td>
<td>1036 and 665</td>
<td>These comments on the volunteer nature of the community seem to contradict each other. I'd also challenge the participation in REFEDS by many individuals as strictly &quot;volunteer&quot; as most people are participating on paid time from their organisations</td>
<td>Nicole Harris, GEANT</td>
<td>Volunteerism is both at individual and organizational levels, and we want to continue the bottom up nature of much of the work. While many volunteer individuals are doing so on some organization's time, do those organizations commit to provide the time when the specific individual withdraws? To sustain some of the program of work, including efforts where the whole of academic interfederation is represented, the commitment from the organizations needs to be sustained, reliable and aligned.</td>
</tr>
<tr>
<td>5</td>
<td>208</td>
<td>The use of &quot;federal&quot; and also the examples provided might lead to believe this is a US based thing, which is of course totally not the case. Perhaps showcasing examples from around the globe would strengthen the notion this is a global effort.</td>
<td>Niels van Dijk, SURF</td>
<td>We have made some wording changes, the current landscape in the report emphasises its global nature, and an additional non-US example was added to the Examples from the Field section.</td>
</tr>

The report does not describe or discuss the existing federation arrangements (e.g., eduGAIN) and assets (e.g., Shibboleth) that have global significance. You need to know where you are, before you can decide when and how you intend to get to your destination.

A specific, aggregative omission is the absence of the role of NRENs. Almost all federations are funded, organised, and governed through an NREN. The same is true of virtually all international activities relating to academic federation: who funds eduGAIN and Shibboleth? The NRENs are the decision-makers, and therefore all change will be directed through their governance mechanisms.

Where there should have been reflective discussion on the tangible, actual facts and realities of federation, there is, instead, unsubstantiated speculation about "future-looking scenarios".

The "key takeaways" and "recommendations", therefore, appear non-sequiturs, having little apparent logical association with the preceding scenarios. This is not to say that they are poor takeaways or recommendations, necessarily, but that they are not clearly supported by the prior analysis.

The recommendations themselves are uncoherent; they often describe activities that the community is already engaged in, to a greater or lesser extent. It might be helpful if the report discussed how existing activities could be re-focused, realigned, etc., to achieve the intended vision or end state.

However, the report does not articulate a vision or end-state. It is unclear what purpose, therefore, what the recommendations are intended to accomplish, in a strategic sense, for the stakeholders and beneficiaries of federation. An unsympathetic reader might read it as a justification of "more of the same", rather than a directed statement of ambition.

The recommendations do not address specifically the main current interfederation effort, eduGAIN, so the many "calls to action" generically directed to the Academic Interfederation does not have a clear reference and it is difficult to understand who should take action.

This is a competing world. It is difficult to imagine that a strong Academic Interfederation leadership will be enough to fight the risk to be marginalized by the Big Tech initiatives. The Academic Interfederation must compete on user experience, meeting expectations and technology standards.

The Academic Interfederation is invited to "present a single face to the world", but the Academic Interfederation does not exist in a vacuum. It is part of that world that it should interact with. Moreover the "single face" paradigm is not acknowledging the important regional differences of the members of the Academic Interfederation community. A single face or a single voice must be based on the synthesis of the many voices on which the community of reference is composed.

In the "Participation and inclusion are the cornerstone of Academic Interfederation" key takeaway, we can read that "success depends on implementing common requirements across all R&E federations", but this is a "slow and unreliable process". Than the proposed solution: "To expand participation and make global collaboration more inclusive" is a non sequitur, as it deals with creating new national federations or inclusivity of federated access, but none is said about the main subject which was presented as "implementing common requirements".
| 11 | 606 - 612 | Line 608 and 609 both suggest that new (young) staff should be hired and trained to take over the role of the more experienced staff. Later, 611-612, it says "...reduce the number of new people within the Academic Interfederation community needed to get the job done."
I assume you don't want to sack the people you just hired and trained, so I would suggest to replace "new people" in line 611 for something like 'more/extra/something similar'. | Casper Dreef, GÉANT | Fixed, thanks. |
| 12 | 627-630 | A questionable statement keeping in mind eduGAIN exists and is researched. | Casper Dreef, GÉANT | Yes we agree that eduGAIN does provide support for the shared metadata to enable Academic Interfederation, but our recommendations for a viable and evolving infrastructure goes far beyond eduGAIN's current remit. |
| 13 | 932-937 | What is the relevance of this section? | Casper Dreef, GÉANT | We have updated the document to make this more clear. If we can work alongside other efforts -- from consumer to government and industry -- to solve the same problems, we can benefit from shared resources. If we don't, the competing solutions will offer at best a redundancy and at worst a challenge to develop cross domain integrations. |
