## What are the problems we are trying to solve?

- Nebulous - improve trust, improve technical integrity, improve quality of metadata, improve maturity (R&S).
- Specific - get everyone using R&S and Sirtfi?
- Changing the rules we have?
- Doing more to repair "problems"?
- Does increasing / changing rules change behaviour? Is policy pointless?
  - Maybe, but process, backed by policy, can change behaviour
- Do we want to look at something just for FOs? for entities as well?
- What are the actions / controls

## Results of the working group
