Draft minutes

Miro - doing audits of IdPs and SPs during the past 5 years. At this moment we have several feedbacks from the SPs and IdPs in which they rely on this. (one of the benefits of H&S architecture)

EIDAS(?) audit check

effort required is 4 'man months' per year

Davide - as a full mesh we check IdPs and SPs - some interactive checks. mainly for IdPs. have thought about SPs

Alex - UKAMF places a lot of trustworthiness in metadata correctness. First aspect is ISO27001 certification for audit-able processes. the other aspect is metadata checking tools (eg from Ian Young)

Tom - asking Alex - curious when reading...what is UKs boundary to the trust concept.

Davide - also a comment 'a lot of trust built up on existing trust relationships within an NREN'

Nicole - metadata registration practices are another view of trust

FP02 - Miro, words sound a bit general but okay

FP03 - Alex making a different point. on Wiki - UK rules and filtering. secure/trustworthy transactions but also focussed on interoperability.

interoperable is a missing word here? add to secure and trustworthy?
Davide - add it as a new expectation

Tom - maybe a new term related to reachability. may not guarantee reachability -
Nicole, some federations require other steps...services with payment/subscriptions.
Alan - IdPs and SPs have the power/right to choose their relying parties
Tom - okay, lets be careful of word guarantee.
