Notes

- reviewed of the pilot IdP table
  - https://wiki.refeds.org/display/GROUPS/RAF+pilot+values+and+IdPs

- findings in the RAF/SFA specs
  - The meeting proposed to the assurance WG that the eduPersonAssurance=MFA/SFA to indicate MFA/SFA capacity is dropped. That feature has little benefit but a high risk of misunderstanding.
  - Clarify ePAffiliation freshness requirement when no affiliation value is populated.
  - ID-unique requirements on tracing accounts to their holders. Timo found some confusing language. Timo to report back the confusing section

- RAF and SFA are still in flux. How to take into account in the pilot?
  - no major updates expected, just smaller tweaks.
  - Mikael to bring information on the updates on RAF/SFA to the pilot telcos

- populating the values for pilot IdPs
  - any configuration examples to share? Mikael to create a links page to the wiki
  - Pilot IdPs’ approach to authentication context
    - Chicago: if SP doesn’t ask, do MFA or the highest possible
    - Aalto: if MFA requested do MFA, otherwise deliver username/password

- making the IdPs release the ePAffiliation values
  - Chicago and XCEDE release attributes to REFEDS R&S SPs
  - Aalto requires REFEDS CoCo but can enable others on a bilateral basis
  - IdPs need to enable ePAffurance release anyway (is not part of R&S bundle)

- SP-side test pages to display the attributes and authentication contexts received
  - Ciologon has one: https://test.ciologon.org/testidp

- next pilot call: Monday 19th March 2018 at 14:30 CET/15:30 EET/8:30 CDT
  - US starts daylight savings – meeting one hour earlier for Europe
