Notes

- Feedback from RAF status update in AARC2 AHM in Athens
  - after dropping authentication, can we still call it REFEDS Assurance Framework? (REFEDS Identity Assurance Framework, instead)?
    - Decided to stick to RAF; the big picture needs to be described in an umbrella document
  - should RP be able to request a particular eduPersonAssurance value? Would be possible on OIDC using scopes.
    - No current need, maybe later in the roadmap when we understand that need better
- SFA profile:
  - https://docs.google.com/document/d/1ZjpzyYWZhqibTelzxX9Vug9Whqb9YEzk29e1FBjL5VM
  - enforcing complexity requirements for 72 char passwords? Decided to drop the complexity rules.
  - remove product names (FreeOTP) and examples, people should refer to 800-63B instead
  - passwords and lookup secret length is now comparable because the latter is assumed to be random and the former is not
- Next steps
  - one week time for people to provide their final comments
  - if several comments, process them on Wednesday 2nd May at 15:30 CEST
  - then expose a clean version of RAF and SFA to a public consultation
  - assumption is the public consultation ends after REFEDS meeting in Trondheim
