David L
Tom B
Nicolas L
Christos K
Mikael L

Notes

- Going to give a report in REFEDS at CERN in 28 Nov: https://refeds.org/34th-meeting-november-2016

- walked through the wireframe document: https://docs.google.com/document/d/15v65wJvRwTSQKViep_gGuEvxLl3UJbaOX5o9eLtsyBI/edit#

- stick to CSP as the term used to refer to IdM/IdP.
- add a section on terms and definitions
- Identity concept – unique: "the Home organisation … is able to reach them". Remove this requirement from Identity concept (this is not about uniqueness). Try to find a better place to inject it to (for instance, attribute freshness) or make it a separate value somewhere
- ID proofing -- don't adopt "federation baseline" as the baselines vary federation by federation
- include credential delivery to identity proofing. Mikael will study what sections from Kantara SAC and eIDAS Loa could be adopted
- authentication – single factor: IGTF requires Kantara AL2 and "[...] an ongoing relationship exists sufficient to ensure the [user's]continued personal possession of the shared secret."
- authentication – multi-factor: it is reasonable to link to REFEDS MFA profile

- next vc: 17 October at 13:30-14:30 (UTC), 15:30-16:30 (CEST), 8:30-9:30 (CDT)
