

eduPerson Registry Information

As of October 2018, REFEDS became the manager for the eduPerson specification.

This serves as the landing page for all registries associated with the eduPerson specification. If you would like to include a registry in this list (which will enable values to be formally recognised in specification development) please [contact us](#).

Registry Owner	Purpose	Location	Values	Date Registered	Comments
InCommon	Namespace for eduPerson Entitlement	urn:mace:dir:entitlement namespace	urn:mace:dir:entitlement:common-lib-terms	2003-06-01	common-lib-terms: Many contracts between higher education institutions and information publishers provide access to published information for a standard higher-ed population consisting of regular full-time faculty, staff, and students (of a particular institution), also including anyone physically present in that institution's library regardless of affiliation. This value is used to indicate that the holder of the entitlement has access to resources under those contract terms. The educational institution party to the contract is identified by the Issuer element of the containing SAML assertion. No other attributes are to be used for this purpose, in particular no scope values on any eduPerson scoped attributes present in the assertion should be so used.
